"Our Experiences in the Treatment of Tropical Disease"

Belgrade, Srpski arhiv za celokupno lekarstvo, Vol 93, No 9  
Sep 65, pp 831-838.

Abstract [Authors' English summary]: During the last three years the authors studied 4 cases of bancrofti-filariasis, 1 case of onchocercosis, 29 cases of schistosomiasis, 2 cases of autochthonous and 1 case of imported kala-azar, 42 cases of strongyloidosis, 53 ankylostomiasis, and 1 case of autochthonous and 8 cases of imported malaria. The authors suggest faculty training in tropical medicine at all Yugoslav faculties of medicine, and a systematic examination of all foreign students as well as Yugoslav citizens, coming from tropical countries. 3 Yugoslav, 7 Western references. "Gonioscopic Findings in Congenital Glaucoma."

Belgrade, Srpski Arhiv za Tselokupno Lekarstvo, Vol 91, No 4, Apr 63; pp 349-358.

Abstract : Gonioscopy is not considered to be a reliable diagnostic method in congenital glaucoma as concluded on the basis of study of 47 eyes in 25 patients; studied at ages 2 months to 47 years and divided into 5 groups according to gonioscopic appearance: there was little if any correlation between gonioscopic picture and severity of glaucoma. Gonioscopy is definitely of interest in such cases, but proper evaluation of findings is possible only to a specialist who sees a vast number of patients. Three gonioscopic illustrations; 17 Western references.

✓ 2575. Effect of enzyme poisons on the vaso-constrictor and -dilator responses of the perfused rabbit ear. G. Hatényi, jun., B. Issekutz, jun., Gy. Szabó, and J. Kecse-Nagy *Acta physiol. Acad. Sci. Hung.* 1954, 6, 277-283 (Physiol. Inst. Med. Univ. Szeged, Hungary). -- Nitroglycerin and perparin were used to elicit the vaso-dilator, adrenalinol for the vaso-constrictor response. The ear perfused with Locke's soln. has no vasodilator response, while vasoconstriction is elicited normally. Perfusion with 15 mm-NaF restores the vasodilator response without altering vasoconstriction. If during a vasodilatation of a NaF-perfused ear NaCN or fluoroacetate are perfused the vasodilatation is abolished. Later the vasoconstriction response will also be lost. The results are discussed from the point of view of the effect of ATP content on muscular relaxation and contraction and on the effect of these enzyme poisons on the ATP content. (German)

ABSTRACT:

Based on studies of the action potentials of the isolated frog heart adapted to high K concentration (functioning with endogenous celluline) and those of the isolated frog heart functioning in the presence of high K concentration under the influence of exogenous celluline, the hypothesis has been formed that celluline acted in the first phase of cellular activity by increasing the permeability of the cell membrane to sodium. In the present experiments it has been de-

monstrated that in an ionic environment of normal composition, cellulose increases the overshoot of the action potential of the isolated frog heart as well as the rate of elevation of the action potential. These findings lend strong support to the hypothesis outlined above. [JPRS]

✓ Investigations of polarization to determine the emission  
 and absorption of luminescent solutions. István Kerck-  
 méty and László Szilav. *Magyar Fiz. Folyóirat* 4, 115-26  
 (1956). — Under certain simple exptl. conditions conclusions  
 can be drawn about the emission and absorption transitions  
 of luminescent org. mols. The mols. are considered linear  
 oscillators. The calcs. of Vavilov (*Physik. Z. Sowjetunion*,  
 3, 103, (1933)), were generalized. Sensitive photoelec.  
 measurements were used and the results compared with those  
 calcd. It could be shown that the emission and absorption  
 transitions of the investigated substances are of dipole  
 character. Solns. of fluorescein, scoulin, and rhodulin,  
 $10^{-4}$  mole/l. in glycerol and tryptaflavine in aq. alc., were  
 investigated. E. Rona

"Cellulin: A Cell Membrane Substance with a Cardiotonic Effect of a Special  
Mode of Action IV. Study of the Specific Effect of Cellulin on Frog Heart  
Ventricle by Means of Transmembrane Potential Measurements"

Budapest, A Magyar Tudományos Akadémia V. Orvosi Tudományok Osztályának  
Közleményei, Vol XVI, No 4, 1965, pages 351-358

Abstract: [Authors' Hungarian summary modified] The effect of cellulin on  
the biopotentials was studied, using an intracellular technique, on the frog  
heart ventricle functioning in normal Ringer's solution as well as in  
others with the NaCl content decreased by 20 and 40 per cent. It was found  
that, on a heart in normal Ringer's solution, the size of the inverse poten-  
tial (overshoot) and the slope of the ascending loop of the action potential  
curve were greatly increased by cellulin while the resting potential and the  
rate of repolarization remained unchanged by it. In contrast to cellulin,  
only the size of the inverse potential was increased by adrenalin while  
the latter did not increase the rate of maximal depolarization. Similar  
correlations were noted on the frog heart functioning in Ringer's solution

with an NaCl content decreased by 20 and 40 per cent. The inverse potential  
which was decreased to a very low value because of the Na deficit was raised  
to a normal value by both cellulin and adrenalin. Only cellulin is capable,  
however, of completely restoring the slope of the ascending loop of the action potential.

Above Forty."

Budapest, Orvosi Hetilap, Vol 104, No 25, 23 June 63, pages 1155-1161.

Abstract: [Authors' Hungarian summary modified] Observations were made  
on 24 cases of glandular cystic hyperplasia of the endometrium among  
climacteric and post menopausal age groups. The histological structure  
of theca hyperplasia was found in every ovary that was removed. Lutein-  
ization of theca cells was more common among the younger age group.  
Active hilus cells were equally frequent in both groups. The mean  
value of estrogen excretion was higher in the older group and was ap-  
proaching the values found in the middle of a normal cycle. The various  
estrogen fraction values are reported in detail and the authors conclude  
that the disease is the function of a disturbance in estrogen synthesis;  
After hysterectomy and removal of the ovaries, estrogen excretion was  
1/2
